

1. Login Module (RBAC)

2. Roles → SA
 ↳ BA

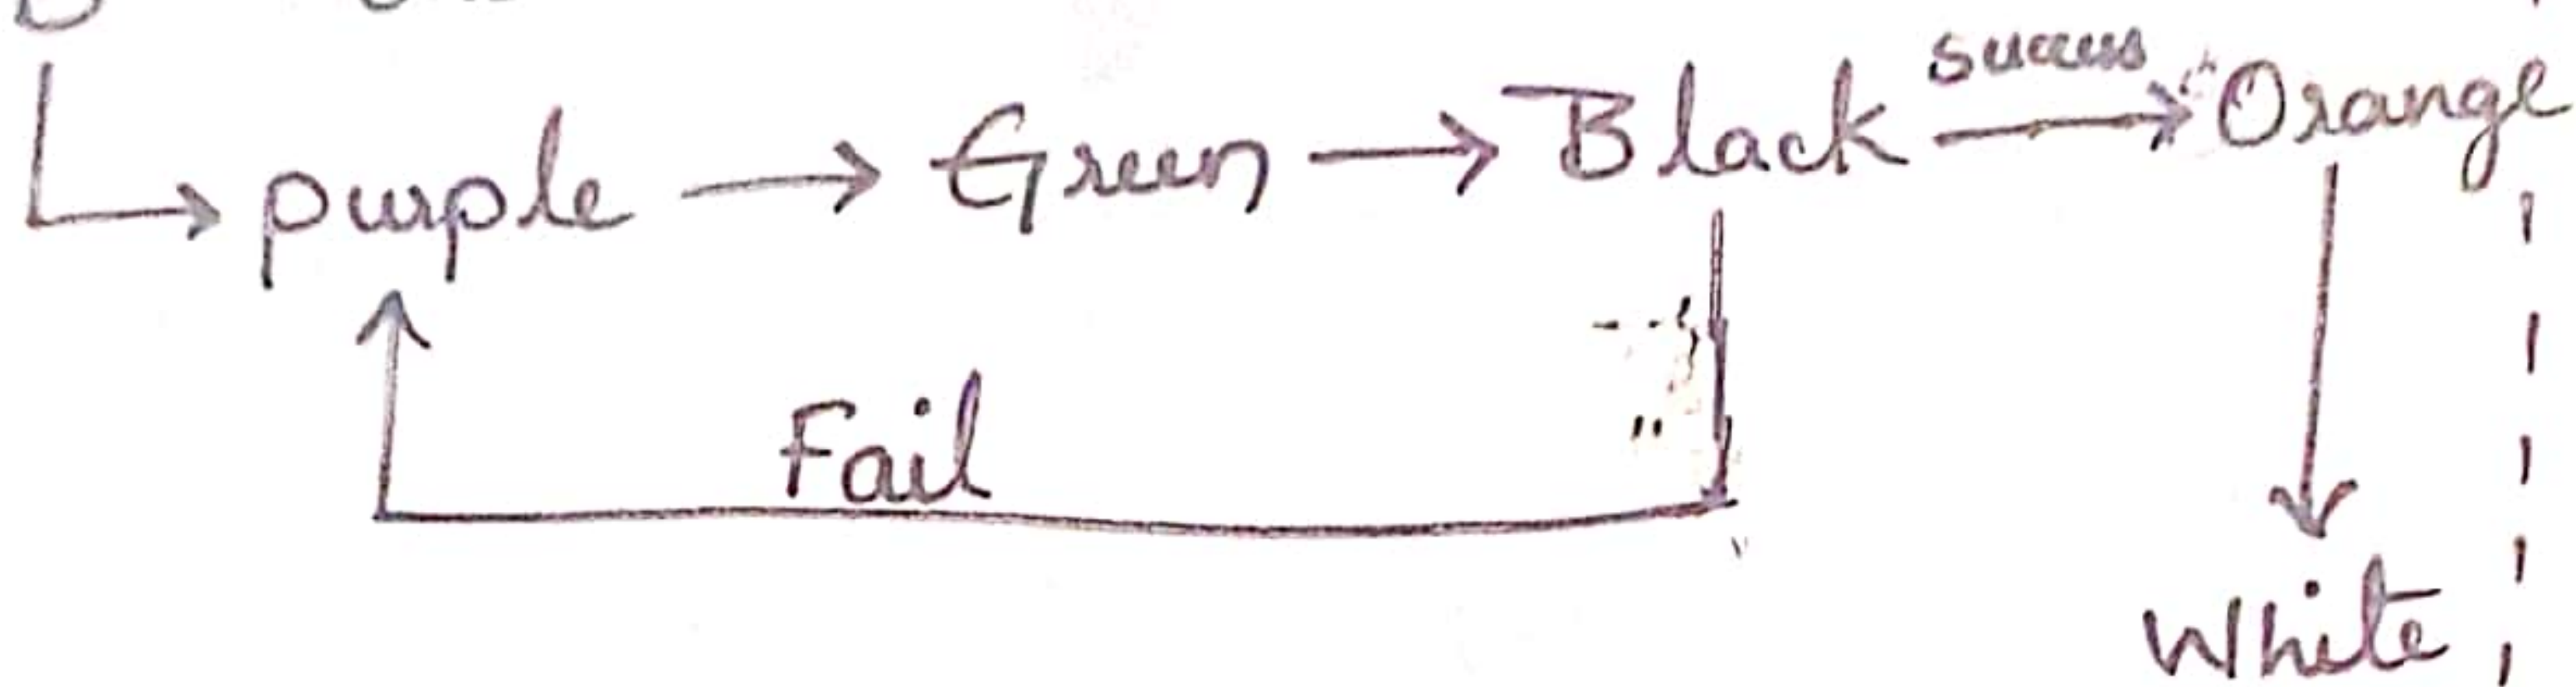

System Architect
Business Architect

3. Teams

- Red (Challengers)
- Blue (Defenders)
- Purple (Strategists)
- Green (Builders)
- Black (Stressors)
- Orange (Gatekeepers)
- Gold (Narrators)
- White (Council/Auditors)

— Each team consists a group of AI, xAI agents with agentic AI capabilities.

R → B → End

"Gold" (xAt full details about project)

3 - Teams

- ① Add-on Experience based performance (SaaS)
- ② Complete installation (SaaS)
- ③ Only Software (PaaS)

* APMC - Agents Portable Memory Capsule.

- Agent portable Model (updates ^{on} learnings post the base line of the model)
- + Experience
- + Memory

RP#RSB - Rule Suite Box

- Rules Spec (MD file with rule details & characteristics)
- Rule Code (Python with rule fix code)
- patcher (To patch the rule spec & rule code)

- Brain Surgery

- A UI which will display 3-frame view
- 1-frame with existing model
- Another frame with loaded APMC in model
- And 3rd frame with visually distinguish^{able} with merged model (APMC + Existing model)

- Visual Patcher

- Should be able to see the code, patching & rule spec and should patch the existing

Code repo and existing rulespec.

- State machine process in ^{rules} works & human intervention VIA RBAC.
- These statemachine applies to go visual patch & brain Surgery.
- Need to connect to LLM by open API key and build a Rag with fraud rules.
